

Cardiac Arrest Post Resuscitation – 10.054

TREATMENT:

NOTES & PRECAUTIONS:

- A. Hyperventilation reduces venous return and may cause hypotension. Additional causes of post-resuscitation hypotension include hypovolemia and pneumothorax especially in the presence of positive pressure ventilation.
- B. The condition of post-resuscitation patients fluctuates rapidly and they require close monitoring.
- C. Transport all post ROSC patients of suspected cardiac nature to SCMC-Bend unless patient needs to be stabilized immediately or not enough resources are available. If post ROSC 12-lead shows STEMI, **DO NOT** activate HEART 1; inform SCMC-Bend ED via HEAR or phone.
